1.0 WARNINGS

1.1 BATTERY PACK

- The battery pack should be fully charged before use. Initially charging the battery pack after purchase or extended storage (8 weeks or more) will not bring the battery to full capacity. A charge/discharge cycle of two to three times with use will bring the battery pack to its full operational capacity.
- Always charge the Battery Pack using the provided Charger. Improper charging may damage the Battery Pack or cause the Battery Pack to explode.
- Switch off the CB before charging to ensure the battery pack is charged properly.
- Avoid exposing the Battery Pack to temperatures below -20°C or above 60°C.
- Never dismantle the Battery Pack or expose the internal battery cell.
- Do not dispose of the Battery Pack in fire.
- Do not short-circuit the Battery Pack
- Dispose of the CB observing local regulations being mindful of the Battery Pack.
- Do not attempt to access the internal battery cell.

1.2 ANTENNA

- Do not use this CB radio if it has a damaged Antenna.
- Do not hold the Antenna when the CB is in use as this may reduce the range and may cause harm.
- Non-genuine Antennas, modifications or attachments could damage the CB, will void the Warranty and breach the CB's compliance

1.3 GENERAL

- If you carry any kind of personal medical device, please consult a doctor before using the Radios.
- Do not use the Radios in a potentially explosive setting (e.g. around pumps, on the lower deck of a boat or around a fuel storage area or around chemical products), or near blasting caps.
- Ensure Radios are turned off if on an airplane or in a hospital.
- Please seek advice from the Manufacturer or your Physician if using this CB in proximity to Medical Devices such as Pacemakers, Hearing Aids etc to ensure they are adequately shielded from RF energy.
- To avoid interference, avoid using the Radios near traditional radios.
- Clean the Radios with a damp cloth. Don't use any cleaning agents or solvents for cleaning.
- Do not modify the Radios in any way. In the event of damage occurring, ensure that the Radios are checked by a qualified professional.

2.0 USER LICENSE INFORMATION

The Citizen Band Radio Service (CBRS) is a two-way, short distance, communications service that can be used by any person in Australia and New Zealand, whether it is for recreational or domestic purposes, or in connection with work or business.

CBRS may be used for:

1. Any form of voice communications activity
2. Telemetry and telecommand applications.

This unit complies with Australian and New Zealand approval requirements AS/NZS 4365:2011 including radio communications (Electromagnetic Radiation Human Exposure) standard 2003.

3.0 INTRODUCTION

Thank you for purchasing the TRX-5W1/TRX-5W1C UHF 80 Channel CB Radio. With a rugged ergonomic design and maximum legal power, this CB offers a host of features including our versatile Dual Channel Monitoring system, inbuilt FM radio and Emergency Siren so please make sure you read through this manual to ensure you get the most out of your new CB Radio.

3.1 FEATURES

5W Transmit Power

17 Kilometre Range

14 Hour Operating Time

FM Radio

Diecast Aluminium Chassis

3.2 PACKAGE CONTENTS

1. CB Radio
2. Antenna
3. Li-ion Battery
4. Belt Clip
5. Desk Top Charger
6. 240V Adaptor
7. 12V Car Charge Lead
8. Carry Strap
9. User Manual

3.3 PRODUCT OVERVIEW

3.3.1 PRODUCT OVERVIEW – LCD DISPLAY

NO.	ICON	MEANING
1		Transmit/Receive Indicator
2		Transmit power set to 0.5W
3		CTCSS activated
4		DCS activated
5		Narrow band.
6		Keypad lock on
7		Battery strength
8		Menu item number
9		Channel mode
10		Function key selected
11		Channel Band B
12		Channel Band A
13		VOX handsfree on

4.0 GETTING STARTED

4.1 INSTALLING THE BELT CLIP

Attach the belt clip by screwing it into the back of the battery with the screws provided.

4.2 SPEAKER/MICROPHONE COVER

Optional earpiece microphones and speaker microphones can be installed in the ports behind this cover.

NOTE:

This CB is not water resistant while using the external Speaker/Microphones or earpieces.

4.3 INSTALLING/REMOVING THE BATTERY PACK

To install the battery pack, insert the bottom of the battery first in to the two locating slots then press to clip the top of the Battery Pack in place.

To remove the Battery Pack, press the release tab on the top of the battery then pull outwards and then up to remove the Battery Pack from the CB.

4.4 CHARGING THE BATTERY PACK

The battery can be charged via either 240V or 12V. Plug the AC adaptor or 12V Car Charger in to the back of the charging cradle.

Slide the CB in to the cradle to begin charging. The battery can also be charged separately in the charger.

Once charging commences, the LED on the front of the charger will illuminate red to indicate that the battery pack is charging. When the battery pack is fully charged, the LED will illuminate green.

NOTE:

It can take up to 3 hours to fully charge the battery.

4.5 BATTERY LEVEL

The Battery status can be viewed by selecting BATT in the Main Menu (Function 15). This will display the current battery voltage.

8.4V:	100% Charged
7.8V:	75% Charged
7.2V:	50% Charged
7.0V:	20% Charged
6.4V:	5%; Recharge now
4.0V:	0%; CB will shut down

5.0 OPERATION – BASIC FUNCTIONS

5.1 POWER/VOLUME

To switch the CB on, rotate the power/volume knob clockwise. This also selects the volume level. To turn the CB off, rotate the knob anti-clockwise until the knob clicks to the off position.

5.2 CHANNEL SELECTION

Press the up arrow to select the next channel and the down arrow to select the previous channel. Press and hold to scan through the channels quickly. This can be done for both A and B bands (see next page).

5.3 DUAL CHANNEL MONITORING

This CB features the ability to monitor two CB channel bands at once (Bands A & B). Both bands consist of UHF CB Channels 1-80. The default setting allows you to select two different channels to monitor (for example your desired communication channel and say an Emergency channel), with both channel numbers being clearly displayed on the LCD screen

The currently selected band is indicated with an arrow as shown below.

Bands A & B can be cycled by pressing the A/B button on the keypad.

When using the CB and you are tuned to a channel on Band A for example, you will receive all communications on this channel.

If there is a transmission on the channel you have selected on Band B, the CB will automatically switch to Band B to receive this communication and will stay on Band B giving you the opportunity to reply if you wish.

After the communication has completed, you can return to Band A by pressing the A/B button. Alternately, if there is a transmission on Band A, the CB will automatically switch to this band.

5.3.1 DISABLING DUAL BAND MONITORING

To quickly stop using this function, you can simply tune both Band A & Band B to the same channel.

The second option is to use Main Menu function **30 TDR** (see page 18) to select Manual Band Selection. By setting this function to **OFF**, you can still program two different channels in Band A and Band B but in this case only Band A or Band B is displayed on the LCD screen at any one time (selected by using the A/B button) and the band will not be automatically swapped should you receive a transmission from the non-selected band.

To go back to automatic band swapping, set the **TDR** function to **ON**.

5.4 TRANSMIT

To transmit, press the **(A) PTT Transmit** button on the side of the CB. Release the button to receive the reply.

5.4.1 SIDE KEYS

(B) Side Key 1: Instant Squelch

Press and hold this key to hear all channel noise. This function is useful if the signal you are trying to receive is very weak. To adjust the regular squelch setting, please see the menu shortcut on the next page.

(C) Side Key 2: Emergency Siren & Personal Alarm

Press to activate the siren. Use the Power/Volume knob to increase or decrease the siren volume to attract attention. The siren will also be transmitted on the selected CB channel to also attract attention. To stop the siren, simply press Side Key 2 again or press the **PTT** button.

5.5 TRANSMISSION RANGE

The optimal transmit range for this CB is achieved in flat, open outdoor areas. This is reduced where there are obstructions such as buildings or rough terrain, or when the CB is used in confined spaces such as vehicle to vehicle communications.

Do not use these CB's when less than 1.5m apart as this may cause interference.

6.0 MAIN MENU SHORTCUTS

Several functions are available on this CB Radio using keypad shortcuts. To access these, press the Function key (**F**) followed by the numerical keys as identified in the diagram:

F + 6 SQT - CTCSS & DCS Activate

Press **F** then **6 SQT** to select the CTCSS & DCS menu. Use the channel up/down keys to select your desired setting. Press the **F** key to confirm your selection and **PTT** to exit the menu.

F + 2 PWR – Transmit Power Adjustment

The default transmit power of this CB is 5W. This can be changed to 0.5W or 3W (to lengthen battery life) by pressing **F** then **2 PWR**. Use the channel up/down keys to select your desired setting. Press the **F** key again or **PTT** to exit the menu.

The following options are available:

1= 0.5W, 2= 3W, 3= 5W

NOTE:

1. Different transmit power levels can be set for each of the channels.
2. When power level 1 is selected, **LO** will also be displayed on the LCD screen.

F + 3 SCN – Channel Scan

Press **F** then **3 SCN** to activate. Channel Scan is useful in scanning the available CB channels to either find who is transmitting nearby or to find a free channel to transmit on.

This function will scan all 80 channels and when there is a transmission detected, the CB will pause on this channel for around 3 seconds after the transmission is completed. If there are no further transmissions after the 3 seconds, the CB will continue scanning. Individual channels can be added or deleted from the scan – see Menu Item 29, Page 21.

F + 6 SQT – CTCSS & DCS Activate

Press **F** then **6 SQT** to select the CTCSS & DCS menu. Use the channel up/down keys to select your desired setting. Press the **F** key again or **PTT** to exit the menu.

See page 21 for more information.

F + 7 MODE – CTCSS & DCS Value

Press **F** then **7 MODE** to adjust the CTCSS or DCS value if activated. Use the channel up/down keys to select your desired setting. Press the **F** key again or **PTT** to exit the menu. See page 21-23 for more information.

F + 8 FM - FM Radio

Press **F** then **8 FM** to activate the FM Radio. Stations can be manually selected by pressing the channel up/down keys, select Scan (F + 3 SCN) to scan up to the next station.

While in FM mode, you can still receive CB Transmissions & Transmit on your selected CB Channel. Once the Transmission has completed, the FM Radio will resume in 6 seconds. This feature can be disabled in the Main Menu, Menu item 5 (page 16). To turn the FM Radio off, press **F** then **8 FM** again.

F Press & Hold – Keypad Lock

Keypad lock is a good setting to use once you have configured the CB radio to your requirements.

Press and hold the **F** key for 2 seconds to activate the keypad lock. Only the PTT/Transmit, instant squelch and channel up/down functions are available when the keypad is locked. Press and hold the **F** key for 2 seconds again to deactivate the keypad lock.

NOTE:

The Emergency Siren is not operable while the keypad lock is active.

7.0 MAIN MENU

7.1 MENU NAVIGATION

To navigate the Main CB Menu, please use the following keys:

Press F + 9 SEL	Enter Main Menu
Press Channel Up/Down	Select menu item Up/Down
Press F	To select menu item to be adjusted
Press Channel Up/Down	To adjust menu item
Press F	To confirm menu item selection
Press Channel Up/Down	Continue to select menu items to be adjusted
Press PTT/ Transmit	To exit menu

7.2 MAIN MENU FUNCTION OVERVIEW.

The following table lists all available Main Menu settings on this CB. Please see detailed descriptions of selected functions following the table.

MENU ITEM	LCD ID	FUNCTION	OPTIONS	DEFAULT	COMMENT
1	Apo	Auto Power Off	OFF, 1-15 Hours	OFF	Select to automatically power off CB
2	bAt-SA	Battery saver	ON/OFF	ON	Prolongs battery life in standby mode.
3	bCLo	Busy Channel Lock	ON/OFF	OFF	Blocks transmission if selected channel is busy
4	t-StoP	Transmission Stop	ON/OFF	OFF	Blocks transmission on this channel if selected
5	rA-d8	Monitor CB in Radio Mode	ON/OFF	ON	CB signals still received when FM is selected.
6	tot	Time Out Timer	n/a	3	Max transmit time 3 minutes.
7	bEEP	Key pad beep	ON/OFF	OFF	Turn on to hear a beep when buttons are pressed
8	uo]CE	Voice Prompts	ON/OFF	OFF	Enables spoken menus and channel numbers.
9	Abr	LCD Backlight Control	AUTO/OFF/Cont	AUTO	Changes LCD backlight operation

49	AnI-ID	n/a	n/a	n/a	Not applicable
50	rESEt	Reset	Reset	n/a	Select to reset radio to factory settings

8.0 ADDITIONAL FUNCTION INFORMATION

Busy Channel Lock: Menu Item 3

This feature can prevent Transmission on busy Channels. Select ON and Transmissions will be blocked from the CB if there is another Transmission occurring on the same Channel. T-Stop will be displayed on the LCD screen if this is the case to alert you that you are not Transmitting.

NOTE:

This setting applies to individual channels so select the channel you wish to apply this setting to first.

Key Beep: Menu Item 7

To activate or deactivate a confirmation beep each time a key or button is pressed on the CB, select ON/OFF for this option.

VOX: Menu Item 24

VOX – Voice Activated Transmit allows you to talk handsfree either just with the CB or using optional Speaker/ Microphone & Earpiece Microphones. To activate VOX, set this function to ON.

The VOX Sensitivity, that is how loud your voice needs to be before VOX transmission starts, is adjustable in Menu Item: 17.

The amount of time until transmission stops after VOX is triggered can be adjusted by Menu Item: 18.

Channels to Scan: Menu Item 29

You can select which Channels you want to include in the Channel Scan List using the **SCnAdd** menu option. By default, all Channels are included. To remove Channels, select the Channel, enter the **CH-SCN** menu and select **DEL** using the Menu Navigation guide above. Follow the same process but select **ADD** to include Channels in the list.

CTCSS & DCS: Menu Item 34/F + 6 SQT

CTCSS and DCS are systems used to ignore other users who you may be sharing the same UHF channel with. This allows you to filter the other transmissions by sharing a selected CTCSS and/or DCS between your calling group. A reminder that using CTCSS or DCS codes does not make your transmissions secure.

To activate a CTCSS or DCS code, select the function via Menu Item 34 or via the **F + 6 SQT** keypad shortcut.

For communication to take place between two CB's with CTCSS or DCS enabled, they must set to the same channel and must have the same CTCSS or DCS setting. If you are communicating with a different brand of CB Radio, you may need to use the table below to convert the CTCSS or DCS frequency codes used by this CB to Channel Numbers used by other brand CB's.

11.0 UHF CHANNELS & FREQUENCIES

11.1 LEGALLY RESTRICTED

Channel 5 and 35

These are reserved as Emergency channels and should only be used in an Emergency.

Channels 22 and 23

These are reserved for telemetry, telecommand and packet data. Transmission on these channels is blocked on this CB.

Channels 61, 62 and 63

Reserved for future allocation and use of these channels are restricted on this CB.

11.2 SPECIAL USE

Channel 10

4WD Clubs or convoys and National Parks

Channel 11

Is the calling channel and should be used to initiate contacts/conversations. Once this is done, you should then change to a free channel.

Channel 18

RV – Caravanner and Campers Convoy Channel

Channel 29

HWY – road safety channel Pacific Hwy, Pacific Motorway (NSW & QLD)

Channel 40

Australia wide road safety channel – primarily used by Truckies and Pilot Vehicles.

11.3 GENERAL CHANNELS

Channels 1-8 & 31-38 plus 41-48 & 71-78

Duplex Channels. These channels are used for Duplex operation in areas where there is a repeater which provides extended range. If there is no repeater in the area, these channels can also be used for standard communication.

NOTE:

This CB Radio does not have Duplex operation.

Channels 9, 12-17, 19-21, 24-28, 30, 39, 49-60 & 79-80

General communication channels at all times.

12.0 UHF FREQUENCIES

13.0 WARRANTY TERMS & CONDITIONS

Our goods come with guarantees that cannot be excluded under the Australian & New Zealand Consumer Law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

This warranty is provided in addition to your rights under the Australian & New Zealand Consumer Law.

Directed Electronics warrants that this product is free from defects in material and workmanship for a period of 36 months from the date of purchase or for the period stated on the packaging. This warranty is only valid where you have used the product in accordance with any recommendations or instructions provided by Directed Electronics.

This warranty excludes defects resulting from alterations of the product, accident, misuse, abuse or neglect.

In order to claim the warranty, please contact us directly for the fastest service contact us directly via the contact details on the included yellow contact information document. Alternately you can return the product to the retailer from which it was purchased or if that retailer is part of a National network, a store within that chain, along with satisfactory proof of purchase. The retailer will then return the goods to Directed Electronics. Directed Electronics will repair, replace or refurbish the product at its discretion. The retailer will contact you when the product is ready for collection. All costs involved in claiming this warranty, including the cost of the retailer sending the product to Directed Electronics, will be borne by you.
